

World Glaucoma Week

March 6–12, 2016

www.wgweek.net

- What can you do in World Glaucoma Week? Ask a relative you know, someone that is over 40 (glaucoma is much more common over the age of 65 infact, but can develop at any age), and ask them if they have heard of glaucoma, and if not, explain that there is a test at their local optometrist that can pick it up and identify the condition early, helping to prevent sight loss.
